

1      **ABSTRACT OF THE DISCLOSURE**

2            A keyboard instrument support has a driving device to control upward and  
3          downward movement of inner tubes relative to the outer tubes and a ratchet device to  
4          retain the elevation of the inner tubes. The ratchet device is composed of a ratchet  
5          alternatively rotated by the driving device and a leverage to abut a ratchet tooth such that  
6          after the inner tubes are elevated by the driving device, the abutment of the leverage to  
7          the ratchet retains the elevation of the inner tubes.
